

10 EASY STEPS to Prevent Falls

Stay Balanced and Aware

1

Be active

Exercise regularly and take classes to help build muscle strength, balance and reduce fatigue.
everybodywalk.org

Prevent slips

Install handholds for toilet and tub, and use a shower chair when bathing.

6

2

Check vision

Have regular, comprehensive, dilated eye exams and keep prescription eyeglasses up-to-date.

Avoid tipsiness

If you drink alcohol, do so in moderation, and know any interactions it may have with your prescription medications.

7

3

Wear shoes

Instead of walking around barefoot or in socks, always wear slippers or shoes with non-slip soles.

Avoid hazards

Make sure household rooms and hallways are always well lit. Avoid throw rugs and slippery floors.

8

4

Monitor meds

Dizziness or fatigue might be linked to medications (including over-the-counter), so talk to your health care team about side effects.

Build healthy bones

If your diet doesn't contain enough calcium or vitamin D, supplements can help.

9

5

Use support when needed

If needed for balance and stability when walking, use a cane or walker.

Discuss risks

Get tailored advice from your health care team about preventing falls. Contact a Wellness Coach at kp.org/wellnesscoaching or call 1-866-862-4295.
